

JBL PRO CONNECT V2.0 - RELEASE NOTES

Public Release – V 02.00.00.00

New Features Implemented:

- Support Pre/Post in Mix Out settings for Speaker models supporting MIXOUT
- Demo mode support in the JPC App for all Speaker models
- Full-screen mode support for the JPC App in the Portrait and Landscape platform
- MultiLingual support for Snapshot naming for all speaker models

Performance Enhancements:

- Firmware bug fixes for all speaker models
- Improved synchronization between Application and Speaker slider controls
- OTA-related issue fixes
- Improved synchronization between Application and Speaker for Input and Output EQ presets
- Improved synchronization between Application and Speaker in FX presets

Note: *Please note that this update mandates all users to remove the speaker from the app and access the device settings menu. Once this process is completed, users can proceed with re-pairing their devices. Failure to follow these steps may result in the speaker crashing."*

Speaker Model Critical Fixes in this release:

- PRX ONE
 - Adjusting gain and compressor on/off would sometimes not activate function and require second press. This is fixed.
- EON ONE MK2
 - After removing battery and reinserting, Bluetooth audio would not playback. This is fixed.
 - On select playback devices, there was a 3s delay to the audio output of the speaker. This is fixed.
 - With low input, the speaker would sometimes go to sleep when it was not supposed to. This is addressed.
- EON ONE Compact
 - After a power cycle, low-frequency speaker would stop outputting. This has been fixed.
 - Bluetooth device playback would stop functioning after adding TWS speaker. This has been fixed.
 - After a charge cycle, speaker would not power back on unless battery was removed and reinserted. This has been fixed.
- PRX900 Full Range
 - The HPF on the mix out would not properly function. This has been fixed.
- PRX900 Sub
 - Upon first connection, firmware update would fail. This has been fixed.
 - If a firmware update failed, speaker would decline secure reconnection with app. This has been fixed.
- EON700 Full Range
 - HPF would stop functioning on mix out. This has been fixed.
 - Select speaker models would have a tone generated above noise floor at 500hz. This has been fixed.
