

Overview – JBL SRX 800 Series

The SRX800 Series is the next generation high performance powered loudspeaker system from JBL Professional. Comprising three full range and two subwoofers, the SRX800 boasts an array of premium features that make it the very best system in its class. Drawing on JBL's long history of groundbreaking technology and innovative loudspeaker design, the SRX800 Series meets the needs of the most demanding applications where high performance, comprehensive control and legendary JBL sound are required.

Every component in the SRX800 Series was purposefully designed and thought through with full consideration for its intended use, each element carefully matched to achieve a perfectly tuned system that is both powerful and easy to use. The full range 12" two-way, 15" two-way and 15" three-way systems are powered by proprietary 2,000 Watt Crown amplification. The 18" subwoofer and 18" dual subwoofer feature 1,000 and 2,000 Watt Crown amplifiers. All models integrate Crown's Proprietary Front-End DriveCore Technology, premium JBL user-configurable DSP, including V5 Tunings compatible with our flagship Vertec and VTX touring systems, and full HiQnet Network control with Mac and PC software and standalone applications for iOS and Android. Now, local touring houses and smaller to medium installations can deploy a no-compromise, all-in-one solution configurable as a full range system with monitors and subs, either floor standing, tripod mounted, stacked, or pole mounted, and fully flyable with the SRX800's integrated suspension points.
