PRESET RELEASE HISTORY

Release 3.0.1:

- Addressed minor formatting issues.

Release 3.0.0:

- The new R3.0.0 presets include optimized LevelMax™ parameters to ensure safe product operation under any conditions. The new presets address a rare problem where under some very specific situations, woofer damage could occur. The new parameters do not affect any of the performance characteristics of the product, including MAX SPL and LF extension. It's recommended that all users switch to the new version. R3.0.0 is included in Performance Manager™ version 2.8.0.
- The VTX S25 is no longer part of the VTX V20 preset library. This new preset library has been created specifically for the VTX S25.

Release 2.1:

- Addressed a gain offset issue with the V20 Bi-Amp presets and 4-Channel amplifiers

Release 2.0:

- Improved phase response
- Improved LF to MF/HF tonal balance for average sized systems
- Simplified preset selection options
- New preset naming convention
- VTX Subwoofer presets are now universal and can be used with any VTX system

Release 1.3:

- Improved VTX 25 limiter settings for better protection
- Corrected HPF for VTX V20 Bi-Amp 60 preset

Release 1.2:

- Corrected VTX S25 LPF for 120 preset option

Release 1.1:

- Preset naming improvements

Release 1.0:

- Initial VTX V20/VTX S25 Preset release

PRESET NAME DESCRIPTION

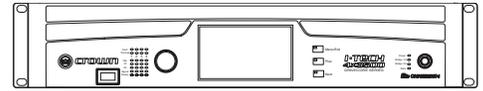

- 80 = Refers to an 80Hz high-pass or low-pass point.
- REAR = Cardioid preset to be used for the rear facing subwoofer enclosure.

NOTES

- The most up to date versions of all VTX presets are always included in the latest version of Performance Manager.
- Make sure the latest Crown Audio I-Tech HD firmware is used.
- Arbitrary preset combinations can be created using Performance Manager.
