- Dedicated storage for Array Frames, Extension Bars, Suspension Bars, and Delta Plates
- Side-access design for fast access to individual components
- Black JBL DuraFlex™ finish
- Heavy-duty four-grade casters

DESCRIPTION

The VTX A12 AF CASE is a road case designed to transport and store the rigging accessories required to suspend VTX A12 and VTX B35 arrays. The overall dimensions of the case are optimized for efficient truck packing alongside VTX A12 and VTX B35 Vertical Transporters. The case provides storage for up to two Array Frames, four Extension Bars, four Suspension Bars, two Delta Plates, and a variety of auxiliary rigging accessories, including shackles, chains, and wire ropes. A unique side-access door allows individual components to be loaded and removed without moving other stored items. Integrated sliding tracks enable large components to move smoothly in and out of the case, while a heavy-duty pull-out drawer provides convenient access to Delta Plates and smaller accessories. The VTX A12 AF CASE features the same heavy-duty casters used on the VTX A12 and VTX B35 Vertical Transporters and is finished in JBL's proprietary black DuraFlex™ coating. For more information on the case and its applications, refer to the **VTX A12 and VTX B35 Rigging Manuals**.
