

# SRX900 RC2

Rain Cover Accessory for SRX900 Products

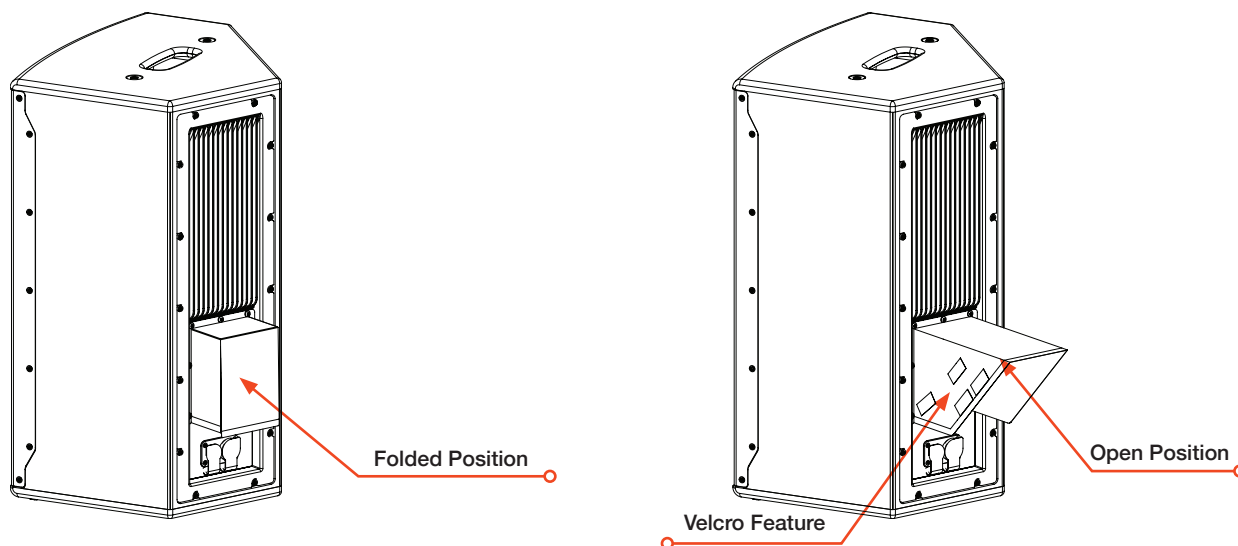

## HIGHLIGHTS

- Universal rain cover for SRX900 products
- Flexible material for conforming to cables
- Covers LCD, audio, and data connections
- Unfolds for easy cable and LCD access
- Designed to remain attached

## DESCRIPTION

The SRX900 RC2 is a universal rain cover designed to protect SRX900 amplifier modules from moisture. It attaches to the amplifier module using the seven included M4 fasteners and shields the LCD, XLR, and etherCON® connectors. A Velcro closure provides quick access to the LCD and connectors, while the cover's flexible material drapes naturally around connected cables. Once installed, the RC2 can remain on the product for both indoor and outdoor use. It should always be used when SRX900 systems operate outdoors. Note that the Neutrik powerCON® TRUE1® power connectors are IP65-rated and do not require additional protection. For detailed installation instructions, refer to the **SRX900 Series Rigging and User Manuals**.
