GENERAL INFORMATION

SIMPLWINDOWS NAME:	BSS BLU Preset Control Module v1.4
CATEGORY:	DSP
VERSION:	v1.4
SUMMARY:	This module controls presets on the BSS BLU Series audio processors.
GENERAL NOTES:	<p>This module is a control module for a suite of modules. The suite of modules utilizes the SIMPL# technology and will only work on the 3-Series Controller.</p> <p>The control modules are responsible for providing the actual control interface in SIMPL. With the SIMPL# technology, the Control modules no longer need to be physically "connected" to the command processor. They register themselves automatically behind the scenes. Each of the control modules also have a command processor ID parameter that you assign to the instance of the command processor to which they report to. You can virtually have an unlimited number of control modules report to a single instance of a command processor.</p> <p>The command processor must be initialized in order for this module to operate properly. Please see the BSS BLU Command Processor and BSS BLU RS232 Command Processor modules help files.</p>
CRESTRON HARDWARE REQUIRED:	3-Series & 4-Series processors only
SETUP OF CRESTRON HARDWARE:	This module requires the BSS BLU Command Processor IP v1.4 or the BSS BLU Command Processor RS232 v1.4 modules in order to operate. Please read the help files associated with these modules.
VENDOR FIRMWARE:	This module was tested using BSS BLU Firmware Version: 86.04.2

Partner: BSS
Model: BLU Series
