- ▶ High-performance satellite speaker for use with subwoofers

The KP4015 is a compact and premium high-output full-range loudspeaker.

The KP4015 uses a 380 mm (15 in) humidity protection woofer with optimal demodulating/cooling aluminium ring inside, which is high power, low distortion and low power compression, and a 2408H-2 37.5 mm (1.5 in) annular polymer diaphragm, neodymium compression driver for 400 watts power capacity. 70° x 100° coverage pattern provides smooth, even coverage whether used in the vertical or horizontal orientation. The high-order passive network minimizes band overlap.

The enclosure is constructed of 15 mm multi-ply high quality birch plywood and finished in a durable black paint coating. The trapezoid enclosure is fitted with dual Neutrik NL4MP connectors for loop thru connection, thirteen M10 threaded suspension points and six M10 screws for Karaoke bracket mounting. It utilizes a 1.5 mm protective screen backed steel grille to provide driver protection with a very professional appearance.

JBL continually engages in research related to product improvement. Some materials, production methods and design refinements are introduced into existing products without notice as a routine expression of that philosophy. For this reason, any current JBL product may differ in some respect from its published description, but will always equal or exceed the original design specifications unless otherwise stated.
